GFCI / ELCI CIRCUIT PROTECTION
There are few products that Carling Technologies hasn’t turned “ON” and fewer industries that haven’t turned to Carling for solutions. With ISO and TS registered manufacturing facilities and technical sales offices worldwide, Carling ranks among the world’s largest manufacturers of circuit breakers, switches, power distribution units, digital switching systems and electronic controls.

**SWITCHES & CONTROLS**
- Rocker
- Toggle
- Pushbutton
- Rotary

**CIRCUIT PROTECTION**
- Hydraulic-Magnetic
- Thermal
- GFCI / ELCI

**CUSTOM SOLUTIONS**
- PDU’s
- Keypads
- Control Modules

**MULTIPLEXED POWER SYSTEMS**
- HMI Devices & I/O Modules
- Programmable Displays
- Data Communication Interfaces
- Electrical Systems Monitoring

**STRATEGIC MARKETS SERVED:**
- On/Off Highway
- Marine
- Telecom/Datacom
- Military
- Renewable Energy

**GLOBAL LOCATIONS:**

- 150+ Engineers
- 70+ Distributors
- 50+ Rep Firms
GFCI/ELCI Circuit Protection
This catalog features Carling Technologies’ current line of GFCIs/ELCIs products, which offer maximum equipment protection against overload and short circuits.

Carling’s Equipment leakage circuit breakers function as hydraulic-magnetic circuit breakers, offering customized overload and short circuit protection. In addition, they sense and guard against faults to ground using innovative electronics technologies. With the exception of small amounts of leakage, the current returning to the power supply will be equal to the current leaving the power supply. If the difference between the current leaving and returning through the earth leakage circuit breaker exceeds the leakage sensitivity setting, the breaker trips and its LED illuminates. The LED gives a clear indication that the trip occurred as a result of leakage to ground. This protection helps prevent serious equipment damage and fire.

Within This Catalog, you will find comprehensive product information for each product series including applications, specifications and ordering schemes.

Available Online are tools such as part configurator, product selectors and stock checks. Please visit www.carlingtech.com for the latest information on all our products.

Application Solution Engineers are readily available to assist you in selecting the appropriate product for your application. For further assistance, please email us at custservice@carlingtech.com

Custom Design Solutions are available for OEMs that require specific product design and performance.

Other Circuit Protection Products such as thermal protection and ground fault circuit protection are also available. Please refer to www.carlingtech.com for a complete list of product offering.

*Options and approvals shown may apply to specific construction combinations only, consult factory for clarification. Manufacturer reserves the right to change product specifications without prior notice.*
The PB-Series, AC Residual Current Circuit Breaker with Overcurrent Protection (RCBO), combines the ground fault protection of a GFCI with the familiar overcurrent tripping characteristics of a normal circuit breaker. It utilizes the hydraulic magnetic principle which provides precise operation and performance even when exposed to extremely hot and/or cold application environments. These precision mechanisms are temperature stable and are not adversely affected by temperature changes in their operating environment. As such, derating considerations due to temperature variations are not normally required, and heat-induced nuisance tripping is avoided.

**Product Highlights:**
- Overload, short circuit and ground fault protection in a single package
- Handle or rocker style actuators
- Wiping Contacts - Mechanical linkage with two-step actuation - cleans contacts, provides high, positive contact pressure & longer contact life.
- A trip-free mechanism, a safety feature which makes it impossible to manually hold the contacts closed during overload or fault conditions.
- A common trip linkage between all poles, another safety feature, ensures that an overload in one pole will trip all adjacent poles.
- Front panel mounting
- Integral push-to-test button

**Benefits:**
- Increases safety around boats and marinas
- Protects against electrical shock hazards in areas near water
- Protects against defects in wires & conductors
- Reduces fire and shock hazards from defects in permanently installed appliances such as water heaters, battery chargers, lighting fixtures, etc.
- Detects lower level ground faults which do not trip ordinary circuit breakers, but can lead to fires, and shock hazards for boating occupants

**Typical Applications:**
- Marine
- Generators
- Lighting

**Resources:**
- Configure a Complete Part
- Download CAD & Sales Drawing
**Electrical Tables**

</table>

**Electrical**

- **Maximum Voltage:** 120/240VAC  60 Hz
- **Current Ratings:** Standard current coils: 0.100, 0.250, 0.500, 0.750, 1.00, 2.50, 5.00, 7.50, 10.0, 15.0, 20.0, 25.0 & 30.0 amps. Other ratings available, see ordering scheme.
- **Insulation Resistance:** Minimum of 100 Megohms at 500 VDC.
- **Dielectric Strength:** UL, CUL - 1500 V 60 Hz for one minute between all electrically isolated terminals. PB-Series circuit breakers comply with the 8mm spacing and 3750V 60 Hz dielectric requirements from hazardous voltage to operator accessible surfaces and between adjacent poles.
- **Impedance:** Values from Line to Load Terminal

*Resistance, Impedance Values from Line to Load Terminals (Values Based on Series Trip Circuit Breaker)*

- **Ampere Rating:**
  - 0.10 - 5.0 ± 15
  - 5.10 - 20.0 ± 25
  - 20.10 - 30.0 ± 35

*Current (AMPS) Tolerance (%)*

**Leakage To Ground**

- **Standard Must Trip:** 120/240VAC  60 Hz
- **Leakage Current Ratings:** 5 & 30 milliamps. 5 ± 1mA
- **Trip Time:** For other ratings, consult factory. 300 ms Max. @ 100%, 40ms Max. @ 500% of must trip leakage current.
- **Test Button:** On unit face along side of actuator.

**Mechanical**

- **Endurance:** 10,000 ON-OFF operations @ 6 per minute; with rated Current & Voltage.
- **Trip Free:** All PB-Series Circuit Breakers will trip on overload or ground fault, even when Handle is forcibly held in the ON position.
- **Trip Indication:** The operating Handle moves positively to the OFF position when an overload or ground fault causes the breaker to trip.

**Physical**

- **Number of Poles:** 1 - 3 poles, where the third pole is neutral
- **Internal Circuit Config.:** Series Trip
- **Weight:** Approximately 65 grams/pole. (2.32 ounces/pole.)
- **Standard Colors:** Housing- Black; Actuator - See Ordering Scheme.

**Environmental**

- **Designed and tested in accordance with requirements of specification MIL-PRF- 55629 and MIL-STD-202 as follows:**
  - **Shock:** Withstands 100 Gs, 6ms, sawtooth while carrying rated current per Method 213, Test Condition “I”. Ultrashort curves tested @ 90% of rated current.
  - **Vibration:** Withstands 0.060” excursion from 10-55 Hz, and 10 Gs 55-500 Hz, at rated current per Method 204C, Test Condition A. Instantaneous and ultrashort curves tested at 90% of rated current.
  - **Moisture Resistance:** Method 106D, i.e., ten 24-hour cycles @ + 25°C to +65°C, 80-98% RH.
  - **Salt Spray:** Method 101, Condition A (90-95% RH @ 5% NaCl Solution, 96 hrs).
  - **Thermal Shock:** Method 107D, Condition A (Five cycles @ -55°C to +25°C to +85°C to +25°C).
  - **Operating Temperature:** -35° C to +65° C
  - **Corrosion:** Tested FMG Test. 3 weeks @ 30°C 75% RH, 100ppb H2S, 20ppb CI2, 200ppb NO2

**Agency Certifications**

- **UL Listed**
  - UL Standard 489
  - UL Standard 1077
  - UL Standard 1053

The PC-Series, AC Residual Current Circuit Breaker with Overcurrent Protection (RCBO), combines the ground fault protection of a GFCI with the familiar overcurrent tripping characteristics of a normal circuit breaker. It detects lower level ground faults that do not trip ordinary circuit breakers, but could lead to shock hazards and fires in installations near water. Innovative features include status LED indicators distinguishing if a breaker is closed with line voltage present, or has opened due to leakage current, or has opened due to over current, or is closed with no line voltage present.

**Resources:**

- Configure a Complete Part
- Download CAD & Sales Drawing

**Product Highlights:**

- Meets latest UL 943 standards
- GFCI self-test auto-monitoring & end-of-life indication
- Integrated push-to-reset button
- Overload, short circuit and ground fault protection in a single package
- Status LED indicators
- Single circuit solution for AC branch ground fault protection
- Optional panel seal

**Typical Applications:**

- Generators
- Water Heaters
- Battery Chargers
- Marine
- AC main ground fault protection for a boat’s entire AC electrical system
PC-Series Switch
DESIGN FEATURES

MOUNTING PLATE
Available in stainless steel or zinc chromate plated carbon steel

OPTIONAL SEAL
IP66/67 panel seals provide ideal protection against salt spray, ozone, dust, water and most acids

LEDs
Two separate lights that indicate power, ground fault leakage and end-of-life

*Manufacturer reserves the right to change product specification without prior notice.

Class A Ground Fault Circuit Interrupters

UL Standard 1053
Ground Fault Sensing and Relaying Equipment

UL Standard 1500
Ignition Protection
### Electrical

**Current Ratings**  
50 Amps maximum  

**Voltage Rating**  
120 VAC, 120/240 VAC

**Dielectric Strength**  
1480 VAC, 60Hz for 1 minute between all electrically isolated terminals

**Insulation Resistance**  
Minimum of 100 Megohms at 500VDC

**Leakage Current Trip Level**  
≤ 1 mA

**Leakage Current Trip Time**  
≤ 25 ms complies with UL 943

**Operating Frequency**  
50/60 Hz

**Reverse Polarity**  
A reversed Line / Load connection to the circuit breaker shall not cause damage to the device

**Grounded Neutral**  
When neutral is grounded on load side of circuit

**Overload**  
50 operations @ 600% of rated current on Breakers

**Switched Neutral**  
2nd Pole on 120V and 3rd Pole on 120/240V, Optional

**Manual Test**  
To be performed at least every month by pressing the test button on the GFCI to verify the device’s ability to respond and trip when subjected to simulated leakage. Current imbalance is sufficient to cause tripping at 85% of rated voltage. Line Power at L1 is required.

**GFCI Auto-Monitoring**  
Performed automatically without opening circuit breaker contacts or compromising ability to respond to ground or neutral faults. Automatic Self-Test performed automatically every time power is supplied within 5 seconds. Automatic Self-Test Frequency: 3 seconds. Line Power at L1 is required. Feedback when auto-monitoring Self-Test fails: Circuit breaker trips and cannot be reset and a visual indication is displayed (See Next Page).

**GFCI Heartbeat Indicator**  
Successful Self Tests are followed by a flash of light per Next Page

**GFCI End of Life**  
Circuit breaker trips and cannot be reset. A visual indication is displayed via the LED’s located on the front of the device (See Next Page). Line Power at L1 is required.

### Mechanical

**Endurance**  
10,000 “On-Off” Operations at 6 per minute; 6000 with Rated Current & Voltage (3000 test button and 3000 manual operations) and 4000 on/off operations with no load.

**Trip Free**  
Trips on short circuit, overload or leakage to ground, even when actuator is forcibly held in the “On” position

### Physical

**Number of Poles**  
1-pole (1 Circuit Breaker + 1 GFCI Sensor Module), 120V. 2-pole (2 Circuit Breakers + 1 GFCI Sensor Module), 120/240V or 120V with Switched Neutral. 3-pole (3 Circuit Breakers + 1 GFCI Sensor Module), 120/240V with Switched Neutral.

**Termination**  
Circuit Breaker Line Side: #10-32  
GFCI Sensor Module Load Side: #10-32. Neutral pigtail provided with non-switched neutral units.

**Mounting**  
Front Panel, #6-32 or M3 threaded inserts.

**Actuator**  
Handle, Flat Rocker, Curved Rocker (with or without rocker guard), Push-to-Reset Rocker

**Internal Configuration**  
Circuit Breaker, Series Trip Switch only (without over-current protection)

**Weight**  
1-pole: approximately 300 grams (10.6 ounces)  
2-pole: approximately 375 grams (13.2 ounces)  
3-pole: approximately 500 grams (17.6 ounces)

**Standard Colors**  
Housing – Black, Test Button – White, Text – White

### Environmental

**Shock**  
Withstands 100 G, 6ms, sawtooth at rated current per Method 213, Test Condition “I”.

**Thermal Shock**  
Method 107D, Condition A (5-cycle at -55ºC to +25ºC to +85ºC to +25ºC)

**Vibration**  
Withstands 0.06” excursion from 10-55 Hz, and 10 G 55-500 Hz, at rated current per Method 204C, Test Condition A. Instantaneous & ultrashort curves tested at 90% of rated current.

**Moisture Resistance**  
93% RH at 30°C for 168 Hours.  
-35°C to +66°C

**Operating Temperature**  
UL-943-6.21, 3 weeks  
Humidity: 30±2°C, 70±2% relative humidity

**Corrosion**  
Mixed Flowing Gases:  
100 ppb H2S,  
20 ppb Cl2,  
200±50 ppb NO2
**GFCI LED Indication**

Loss of line power results in no LED output and no continuous trip

**GFCI Test Instructions**

1. Turn “OFF” the GFCI Breaker actuator. Turn on the power to the panel. The green and red LED’s should be off.
2. Turn “ON” the GFCI Breaker actuator. The green “POWER” LED should show steady illumination and the red “LEAKAGE FAULT” LED should flash every 3 seconds to indicate a successful self-test.
3. Depress the “TEST” button. This will cause the actuator to move to the “OFF” position and the red LED to turn on and show steady illumination, indicating that the GFCI is functioning properly. The green LED will also go from steady to off. If the actuator fails to move to the “OFF” position or the red LED fails to illuminate, the unit MUST be replaced.
4. Turn the GFCI Breaker actuator to the “ON” position. The red LED should flash every 3 seconds and the green LED should show steady illumination.
5. This test is to be performed on a monthly basis and recorded on the “Monthly Test Reminder” label.

**ELCI LED Indication**

Indicator - Two integrated LEDs, Red & Green
- Green LED On, Red LED Off - Line Voltage is present, the breaker is closed, and the device is protecting the circuits against over current and leakage current.
- Green LED Off, Red LED On - The device has detected leakage current and has opened the circuit breaker.
- Green LED Flashing, Red LED Off - The circuit breaker has opened due to over current or has been turned off manually
- Green LED Off, Red LED Off - Line Voltage is not present
- Green LED Flashing, Red LED Off, Amber LED ON - Indicates Hot & Neutral are reversed and the circuit breaker is open

Neutral Protection - When neutral is grounded on load side of circuit

Test Button - Located on Ground Fault Module

</tbody>
</table>

**Notes:**

- Other time delay values available, consult factory.
- Delay Curves 21, 22, 24, 26: Breakers to hold 100% and must trip at 125% of rated current and greater within the time limit shown in this curve.
- Delay Curve 20: Breakers to hold 100% and must trip at 150% of rated current and greater within the time limit shown in this curve.
- All Curves: Curve data shown represents breaker response at ambient temperature of 77°F (25°C) with no preloading. Breakers are mounted in standard wall-mount position.
- The minimum imrush pulse tolerance handling capability is 12 times the rated current. These values are based on a 60 Hz 1/2 cycle, 8.33 ms pulse.

**About Carling**

Founded in 1920, Carling Technologies is a leading manufacturer of electrical and electronic switches and assemblies, circuit breakers, electronic controls, power distribution units, and multiplexed power distribution systems. With four ISO registered manufacturing facilities and technical sales offices worldwide, Carling Technologies Sales, Service and Engineering teams do much more than manufacture electrical components, they engineer powerful solutions! To learn more about Carling please visit [www.carlingtech.com/company-profile](http://www.carlingtech.com/company-profile).

To view all of Carling’s environmental, quality, health & safety certifications please visit [www.carlingtech.com/environmental-certifications](http://www.carlingtech.com/environmental-certifications)
